Consumer Confidence Report for Misty Meadows I & Highland Hills Mobile Home Park Annual Report for 2009

We're very pleased to provide you with this year's Annual Quality Water Report. We want to keep you informed about the excellent water and services we have delivered to you over the past year. Our goal is, and always has been, to provide you a safe and dependable supply of drinking water while keeping cost as low as possible. Our water comes from groundwater out of the Port Deposit Gneiss.

I'm pleased to report that your drinking water is safe and meets federal and state requirements. If you have any questions about this report or concerning your water utility, please contact Nancy Crue at 410-939-0027. We want you, our valued customers and neighbors, to be informed about your water utility.

The water is routinely monitored for constituents that may be found in your drinking water according to Federal and State laws. The following table shows the results of our monitoring for the period of January 1, 2009 to December 31, 2009. All drinking water, including bottled drinking water, may reasonably be expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily pose a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Non-Detects (ND) - laboratory analysis indicates that the constituent is not present.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Parts per trillion (ppt) or Nanograms per liter (nanograms/l) - one part per trillion corresponds to one minute in 2,000,000 years, or a single penny in \$10,000,000,000.

Parts per quadrillion (ppq) or Picograms per liter (picograms/l) - one part per quadrillion corresponds to one minute in 2,000,000,000 years or one penny in \$10.000.000.000.000.

Picocuries per liter (pCi/L) - picocuries per liter is a measure of the radioactivity in water.

Millirems per year (mrem/yr) - measure of radiation absorbed by the body.

willion Fibers per Liter (MFL) - million fibers per liter is a measure of the presence of asbestos fibers that are longer than 10 micrometers. Variances & Exemptions (V&E) - State or EPA permission not to meet an MCL or a treatment technique under certain conditions.

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level - (mandatory language) The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal - (mandatory language) The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Test Results

Microbio	logical	Contai	minants

Contaminant	Violation Y/N	Level Detected	MCL	MCL Goal	Unit of Measure	Likely Source of Contamination
Total Coliform	Y-	0	Presence of bacteria in	0	Wicacaro	Naturally present in the environment
Bacteria	Reporting		5% of monthly samples			, ,
	Rad	ioactive Cor	taminants Last tested	by MDE	August 20	001 only detects listed
Alpha emitters	N	2	15	0	PCi/L	Erosion of natural deposits
Radon 222	N	2615			PCi/L	Erosion of natural deposits
	Ino	rganic Conta	minants Last tested b	y MDE C	October 20	06 only detects listed
Asbestos	N	Waived	7	7	MFL	Decay of asbestos cement water mains; erosion of natural deposits
Copper		.48 in 2007	AL=1.3	1.3	ppm	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
Cyanide	N	Waived	200	200	ppb	Discharge from steel/metal factories; discharge from plastic and fertilizer factories
Fluoride	N	Nd Sep 09	4	4	ppm	Erosion of natural deposits; water additive which
						promotes strong teeth; discharge from fertilizer and aluminum factories
Lead	N	0 in 2007	AL=15	0	ppb	Corrosion of household plumbing systems, erosion of natural deposits
Nitrate (as Nitrogen)	N	1.58 in 2009	10	10	ppm	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits
Synthetic C	rganic Con	taminants in	cluding Pesticides and	Herbicio	des Last te	sted by MDE in 2006, only detects listed
Di(2-ethylhexyl) phthalate	N	1.7	6	0	ppb	Discharge from rubber and chemical factories
	V	olatile Organic	Contaminants Last test	ed by MD	E August 20	009 only detects listed
THM [Total trihalomethanes]	N	0 in 2007	80	0	ppb	By-product of drinking water chlorination
HAA5 Haloacetic Acids	N	0 in 2007	60	0	Ppb	By-product of drinking water chlorination
-			Non-Regulate	d Conta	minants	
Chloroform	N	Nd Sep 09			Ppb	By-product of drinking water chlorination
Iron	N	0.37 Aug 06	NA	0	Ppm	Naturally occurring
Manganese	N	.15 Aug 06	NA	0	ppm	Naturally occurring
Sodium	N	30 Sep 09	NA	NA	ppm	Naturally occurring

Microbiological Contaminants:

⁽¹⁾ Total Coliform. Coliforms are bacteria that are naturally present in the environment and are used as an indicator that other, potentially-harmful, bacteria may be present. Coliforms were found in more samples than allowed and this was a warning of potential problems.

⁽²⁾ Fecal coliform/E.Coli. Fecal coliforms and E. coli are bacteria whose presence indicates that the water may be contaminated with human or animal wastes.

0070247

Microbes in these wastes can cause short-term effects, such as diarrhea, cramps, nausea, headaches, or other symptoms. They may pose a special health risk for infants, young children, and people with severely compromised immune systems.

Radioactive Contaminants:

(5) Alpha emitters. Certain minerals are radioactive and may emit a form of radiation known as alpha radiation. Some people who drink water containing alpha emitters in excess of the MCL over many years may have an increased risk of getting cancer.

Inorganic Contaminants:

- (9) Asbestos. Some people who drink water containing asbestos in excess of the MCL over many years may have an increased risk of developing benign intestinal polyps.
- (14) Copper. Copper is an essential nutrient, but some people who drink water containing copper in excess of the action level over a relatively short amount of time could experience gastrointestinal distress. Some people who drink water containing copper in excess of the action level over many years could suffer liver or kidney damage. People with Wilson's Disease should consult their personal doctor.
- (15) Cyanide. Some people who drink water containing cyanide well in excess of the MCL over many years could experience nerve damage or problems with their thyroid.
- (16) Fluoride. Some people who drink water containing fluoride in excess of the MCL over many years could get bone disease, including pain and tenderness of the bones. Children may get mottled teeth.
- (17) Lead. Infants and children who drink water containing lead in excess of the action level could experience delays in their physical or mental development. Children could show slight deficits in attention span and learning abilities. Adults who drink this water over many years could develop kidney problems or high blood pressure. If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Running Brook Corporation is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your drinking water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the EPA Safe Drinking Water Hotline at 1-800-426-4791 or at http://www.epa.gov/safewater/lead
- Drinking Water Hotline at 1-800-426-4791 or at http://www.epa.gov/safewater/lead.

 (19) Nitrate. Infants below the age of six months who drink water containing nitrate in excess of the MCL could become seriously ill and, if untreated, may die. Symptoms include shortness of breath and blue-baby syndrome.

Synthetic Organic Contaminants:

(33) Di (2-ethylhexyl) phthalate. Some people who drink water containing di (2-ethylhexyl) phthalate in excess of the MCL over many years may have problems with their liver, or experience reproductive difficulties, and may have an increased risk of getting cancer.

Volatile Organic Contaminants:

- (73) TTHMs [Total Trihalomethanes]. Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous systems, and may have an increased risk of getting cancer.
- (74) Toluene. Some people who drink water containing toluene well in excess of the MCL over many years could have problems with their nervous system, kidneys, or liver.

As you can see by the table, our system did have a violation. This was a reporting violation, the reports were mailed to MDE from the lab late, there was no limit exceeded. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected. The EPA has determined that your water IS SAFE at these levels.

All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

MCL's are set at very stringent levels. To understand the possible health effects described for many regulated constituents, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect.

In our continuing efforts to maintain a safe and dependable water supply it may be necessary to make improvements in your water system. The costs of these improvements may be reflected in the rate structure. Rate adjustments may be necessary in order to address these improvements.

Thank you for allowing us to continue providing your family with clean, quality water this year. In order to maintain a safe and dependable water supply we sometimes need to make improvements that will benefit all of our customers. These improvements are sometimes reflected as rate structure adjustments. Thank you for understanding.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Running Brooke works very hard to provide top quality water to every tap. Improvements are made to the system each year to ensure the quality, quantity, and the reliability of your water supply. This past year we replaced some of the pressure tanks that maintain the pressure to your tap. We ask that all our customers help us to protect our water sources, which are the heart of our community, our way of life and our children's future. Please call our office at 410-939-0027 if you have questions.

In case of an emergency call 410-378-2135 24 hours a day, every day.
